Patent No. 6113898
GENERAL INFORMATION:
APPLICANT: Anderson, Darrell R.
TITLE OF INVENTION:
TITLE OF INVENTION: TO HUMBN B7.1 AND/OR B7.2 PRIMATIZED FORMS THEREOF,
TITLE OF INVENTION: PHARMACEUTIAL COMPOSITIONS CONTAINING, AND USE THEREOF AS TITLE OF INVENTION: IMMUNOSUPPRESANTS."
CORRESPONDENCE ADDRESS:
ADDRESSEE: BURNS, DOANE, SWECKER & MATHIS
                                                        Sequence 27, Application US/09740002

Sequence 27, Application US/09740002

Sequence 27, Application US/09740002

SENERAL INFORMATION:

APPLICANT: MORROW, PHILLIP

APPLICANT: MORROW, PHILLIP

TITLE OF INVENTION: BUFTRALIZING HIGH AFFINITY HUMAN MONOCLONAL ANTIBODIES

TITLE OF INVENTION: MANUFACTURE AND THERAPEUTIC USE THEREOF

TITLE OF INVENTION: MANUFACTURE AND THERAPEUTIC USE THEREOF

CURRENT APPLICATION NUMBER: US/09/740,002

PRIOR APPLICATION NUMBER: 08/488,376

PRIOR APPLICATION NUMBER: 08/488,376

PRIOR FILING DATE: 1999-06-17

NUMBER OF SEQ ID NOS: 27

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

-!- MISCELLANBOUS: THE SEQUENCE SHOWN IS THE KERN-/OZ-/MCG- CHAIN FOUND IN PROTEINS 8H, X, AND NIG-64. THE KERN PROTEIN HAS THE KERN PROTEIN HAS THE OZ+ MARKER, THE NEW PROTEIN HAS THE OZ+ MARKER, THE MCG PROTEIN HAS THE KERN+ MARKER, AND THE MCG+ MARKER.

-!- MISCELLANBOUS: SIX TANDEM LAMBDA-TYPE GENES WERE IDENTIFIED & THE 3 MOST S' WERE SEQUENCED. THESE CORRESPOND TO THE MCG SEQUENCE (LAMBDA-1), THE KERN-/OZ- SEQUENCE (LAMBDA-2) & THE KERN-/OZ+ SEQUENCE (LAMBDA-3).

-!- SIMILARITY: Contains 1 immunoglobulin-like domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   MEDLINE-82080680; PubMed-6273747;

This protein fragment is derived from a human immunoglobulin kappa CL domain and is used to describe a novel method to produce polypeptides which contain an repitope from the Pc region of an IgG molecule and a mutated salvage receptor binding epitope. They are useful for the treatment of LFA-1 mediated disorders. These are conditions caused by cell adherence interactions involving the LFA-1 receptor on lymphccytes, e.g. rell inflammatory responses. The mutated salvage receptor sequence in the polypeptides means that they have increased in vivo circulatory half-lives when compared to normal Fc regions of IgG molecules.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                9
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         9

activation protein alpha (RAP). FAP is a cell surface molecule activation protein alpha (RAP). RAP is a cell surface molecule of reactive stronal fibroblast, and its induction is a highly consistent molecular trait of the reactive strona of many types of epithelial cancer. Although F19 may be useful in vitro, e.g., for diagnosis, its applications for in vivo use in humans are problematic as it elicits a human anti-mouse response which reduces the efficacy of the antibody in patients and impairs continued administration. The novel human reshaped F19 was humanised by grafting the murine complementarity determining regions (CDRs) of F19 onto human variable regions to human constant regions. These modifications also result in the improved producibility in eukaryotic cell culture systems as compared to a chimexic antibody having the entire variable regions of F19 joined to human constant regions. The human reshaped F19 antibody has low immunogenicity for humans and is useful for treating cancers e.g., colorectal cancers, non-small cell lung cancers, breast cancers, head and neck cancers and metastatic cancers, bladder cancers, continued standard in the indiamed become of the concers and metastatic cancers. It is also useful for the concert of the concers and metastatic cancers. It is also useful for the concert of the concers and metastatic cancers. It is also useful for the concert of the concert

This invention describes a method for preparing a variant Fab or F(ab')2 polypeptide having increased half-life in vivo, where the polypeptide contains an Ig or Ig-like domain comprising a CH1 and/or CL region, is cleared from the kidneys and does not contain an IgG For region. The method involves altering the polypeptide within the CH1 or CL region to incorporate a salvage receptor binding epitope taken from two loops of a CH2 domain of an IgG For region. The polypeptides have a reduced renal Production of antibody fragments with reduced renal clearance - by introducing salvage receptor binding epitope into CH1 or CL region Disclosure; Column 55-58; 38pp; English.                                                            focal ischaemic stroke by administering novel anti-CD18 antibody which has cerebroprotective properties. The invention particularly describes a method of treating focal ischaemic stroke caused by the obstruction of a main cerebral artery which comprises administering an anti-CD18 antibody to increase the blood flow or reduce the infarct size, where: (1) the antibody binds to an extracellular domain of CD18 and inhibits or reduces the ability of the cell expressing CD18 too bind too adothellum, (2) the antibody binds CD18 with an affinity of less than 4 nm, or (3) the antibody dissociates CD11b/CD18 complex. This sequence represents the human Kappa-CL domain which is used to illustrate the method of the

half-life of polypeptides The polypeptides comprise an ignorant domain, and a salvage receptor binding opinope within the Igor Ig-like domain, and a salvage receptor binding epitope within the Igor Ig-like domain. The salvage receptor binding taken from two loops of the CTF domain of an Fo region of an Ig molecule. The modified polypeptides are useful for preventing or treating allergic conditions (e.g. eczema), antigen-antibody complex mediated disorders, e.g. Crohn's disease, psoriasis, meningitis, allergic conditions (e.g. eczema), antigen-antibody complex mediated reducing inflammatory responses and inducing tolerance to immunostimulants. They may also be used in diagnostic assays. The nucleic acids and modified polypeptides are useful for the passive immunisation of patients, as well as for affinity purification of an antigen from recombinant cell culture or natural sources.
                                                                                                           New nucleic acid encoding new modified polypeptides with increased circulatory half-life useful for preventing/treating LFA-1-mediated disorders, e.g. reducing inflammatory responses or inducing tolerance to immunostimilans -

The method is used to improve the clinical outcome in acute ischaemic stroke and to provide an alternative to thrombolytic therapy for treating thromboembolic stroke, particularly where thrombolytic therapy therapy has been unsuccessful or is contra-indicated. The present sequence represents the human kappa CL domain used in the method of the

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention relates to the use of a humanised antibody (I), which specifically binds to fibroblast activation protein alpha (PAPalpha), for manufacturing a medicament for treating cancer. (I) has the complementary determining a region (CDR) of the monoclonal antibody F19, but has framework modifications resulting in improved producibility in host cells as compared to a chimeric antibody having the variable regions of F19 and foreign constant regions. To generate (I), a chimeric antibody was constructed having variable regions of F19 and human light and heavy constant regions. (I) is useful for treating a patient suffering from a pathological condition characterised by expression of FAPalpha, such as colorectal cancer, nor small cell lung carcinoma, breast cancer, paroreatic cancer, tumours, systemic autoimmune diseases and allergies. The present sequence is human kappa light constant chain which was used to produce (I).
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 09
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  9

The invention relates to a compound which comprises a target cell-specific portion, comprising an humanised monoclonal antibody, having specificity for polymorphic epithelial mucin (FBM) or its antigen binding fragment and a cyctoxic portion having endonucleolytic activity, exemplified by AAMS2184-AAMS2188 and encoded by ABA02682-ABA02728. The compound has cytostatic activity useful for treating cancer and acting as a potential inducer of apoptosis.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                87 RIVAAPSVFIFPPSDEQLKSGTASVVCLLNNFYPREAKVQWKVDNALQSGNSQESVTEQD 146

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           It is employed in the prepn. of CD4 fusions. The insert site is given in the Features Table. CD4 fusion proteins can have antiviral and fimunomodilatory activity are esp. useful for treating HIV infections, regardless of genetic variation within the virus. They and antibodies raised against them can also be used diagnostically for assaying adhesons and their ligands.

                                                                                                                                                     27-FEB-1998;
                                                                                                                02-SEP-1999
                                                                            Synthetic.
```

The present invention describes P-selectin ligand fusion proteins comprising amino acids 42-60, 42-402, 42-310, 42-88, 42-118 or 42-189 or february amino acids 42-60, 42-402, 42-310, 42-88, 42-118 or 42-189 or february amino acids 42-60, 42-402, 42-310, 42-88, 42-118 or 42-189 or february amino acids a ligand for P-selectin number ondothelial cells and platelets. The isolated P-selectin ligand proteins may be useful in treating conditions characterized by P., E. or L-selectin mediated intercellular adhesion e.g. myocardial infarction, metastatic conditions, inflammatory disorders, thermal injury such as burns or frostbite, autoimmune thyroiditis, experimental allorgic encephalomylelits, multiple sclerosis, multiple organ injury syndrome secondary to trauma, diabetes, Reynaud's syndrome, corgan injury syndrome secondary to trauma, diabetes, Reynaud's syndrome, neutrophilic dermatosis (Sweet's syndrome). Inflammatory bowel disease, drawe's disease, glomerulomephitis, gingivitis, periodonitis, haemolytic uraemic syndrome, ulcerative colitis, crohn's disease, or cytokine-induced toxicity. Isolated P-selectin ligand proteins may also be useful in organ transplantation, both to prepare organs for transplantation and to quell organ transplant rejection. Peslectin ligand proteins can be used to treat haemodialysis and leukophoresis patients or used as an antimetastatic agent. The fusion proteins can also be used to treat haemodialysis and leukophoresis patients or used as an antimetastatic agent. The fusion proteins can be used for the production of antibodies for use in therapy, detection, diagnosis and drug screening. AAZ08839 to AAZ08850 enocde specifically alven in AAZ0866 to AAX29777.
